

National Center for Chronic Disease Prevention and Health Promotion Projects

Prevention Research Centers (PRCs)

<http://www.cdc.gov/prc/>

- Funded at academic institutions across the United States.
- Conduct research projects that promote health and prevent chronic disease.
- Support multidisciplinary research teams that seek solutions, strategies, and policies to address public health priorities.
- Develop and deliver trainings and other materials for the public health workforce.
- Conduct research funded by entities other than NCCDPHP.

Racial and Ethnic Approaches to Community Health (REACH) programs

<http://www.cdc.gov/reach/about.htm>

- Each Center specializes in developing strategies and programs to reduce disparities in several different chronic diseases affecting different high-risk populations.
- Provide training for and disseminate the programs and materials they have developed and field-tested to other similar communities.
