

Emory Prevention Research Center

Partnering with communities and leveraging research to prevent cancer and promote health equity.

portfolio of research projects. Our two signature projects focus on the home environment: one to create home environments that support healthy eating and the other to create smoke-free homes.

COMMUNITY ENGAGEMENT

Most of the EPRC's activities are directly relevant to communities. The EPRC has a broad range of community partners. We practice community-based participatory research in southwest Georgia and are guided by a Community Advisory Board comprising over 20 residents and local organizations.

EVALUATION

EPRC faculty and staff have a strong track record in evaluating community-based public health programs. We also offer training and technical assistance to community partners interested in building their capacity to conduct evaluations of their own programs.

TRAINING

One of the EPRC's goals is to strengthen the capacity of both the public health workforce and our community partners to use evidence-based approaches to designing, implementing and evaluating health promotion programs. We also offer training on grant-writing and health literacy.

DISSEMINATION

The EPRC strives to share its work with a range of audiences that may find it useful. We publish in peer-reviewed journals to share our findings with researchers and public health practitioners. In addition to publishing, we present our research and evaluation findings at local and national conferences. We also use press releases and media interviews to disseminate our findings to the general public, along with infographics and our website.
